

# **COWALERT** **BY ICEROBOTICS**

From accelerometer to useful information  
– research and practical applications

Dr Vivi M Thorup, Lead Animal Scientist

Guzhva Seminar, Alnarp, Sweden, 31<sup>st</sup> May 2018

## This Presentation

- About IceRobotics
- Introduction to CowAlert
- Research Examples
- Practical Applications
  - Lying Time
  - Lameness
- Future Perspectives
- Summary

IceRobotics Ltd

Company founded

DASIE

Lameness detection

## IceTags and IceQubes for Science

### Species/age groups:

Dairy cattle

Beef cattle

Calves

Yaks

Sheep

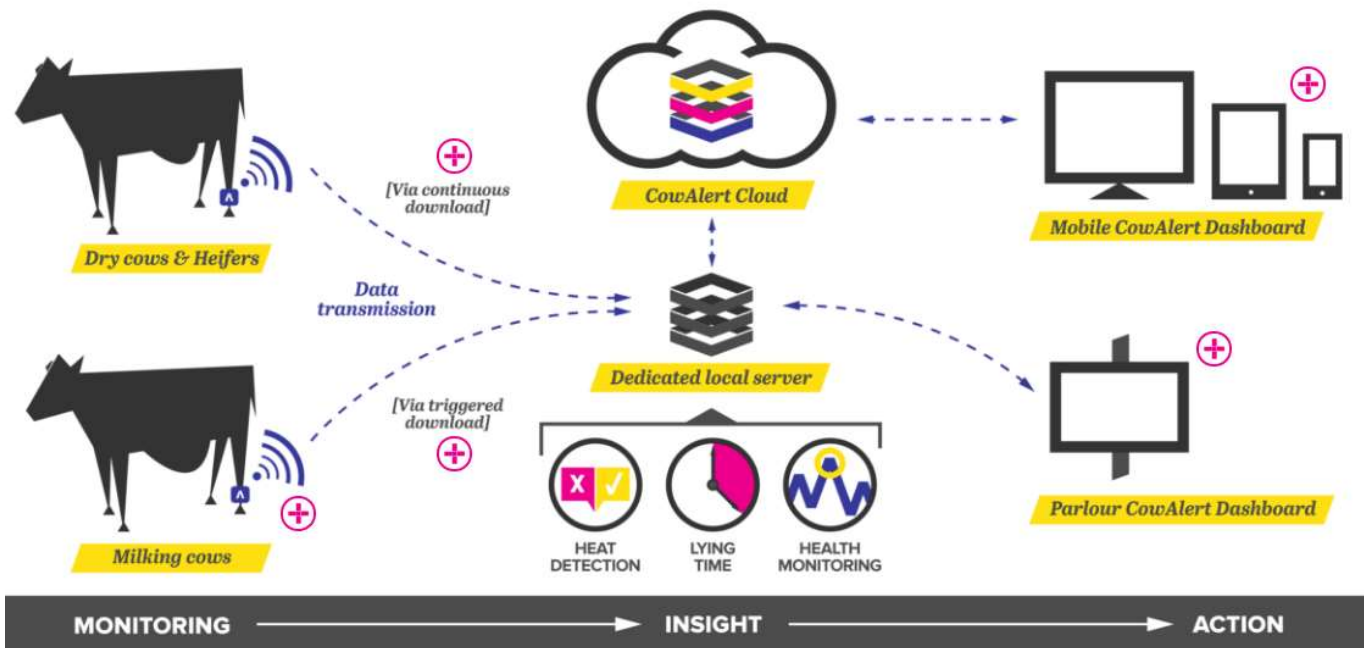

Goats

Horses

Swine (*in prep*)

To date: 122 peer-reviewed papers

## Cows in the Cloud

- Launched 2011
- On 200+ commercial farms
- 50+ million “cow days” of data from farms in the UK, Netherlands, Germany, Poland, USA, and Australia
- Cloud storage
- Heat & health issue detection
- Whole herd monitoring
- Dry cow monitoring

# IceQube Output

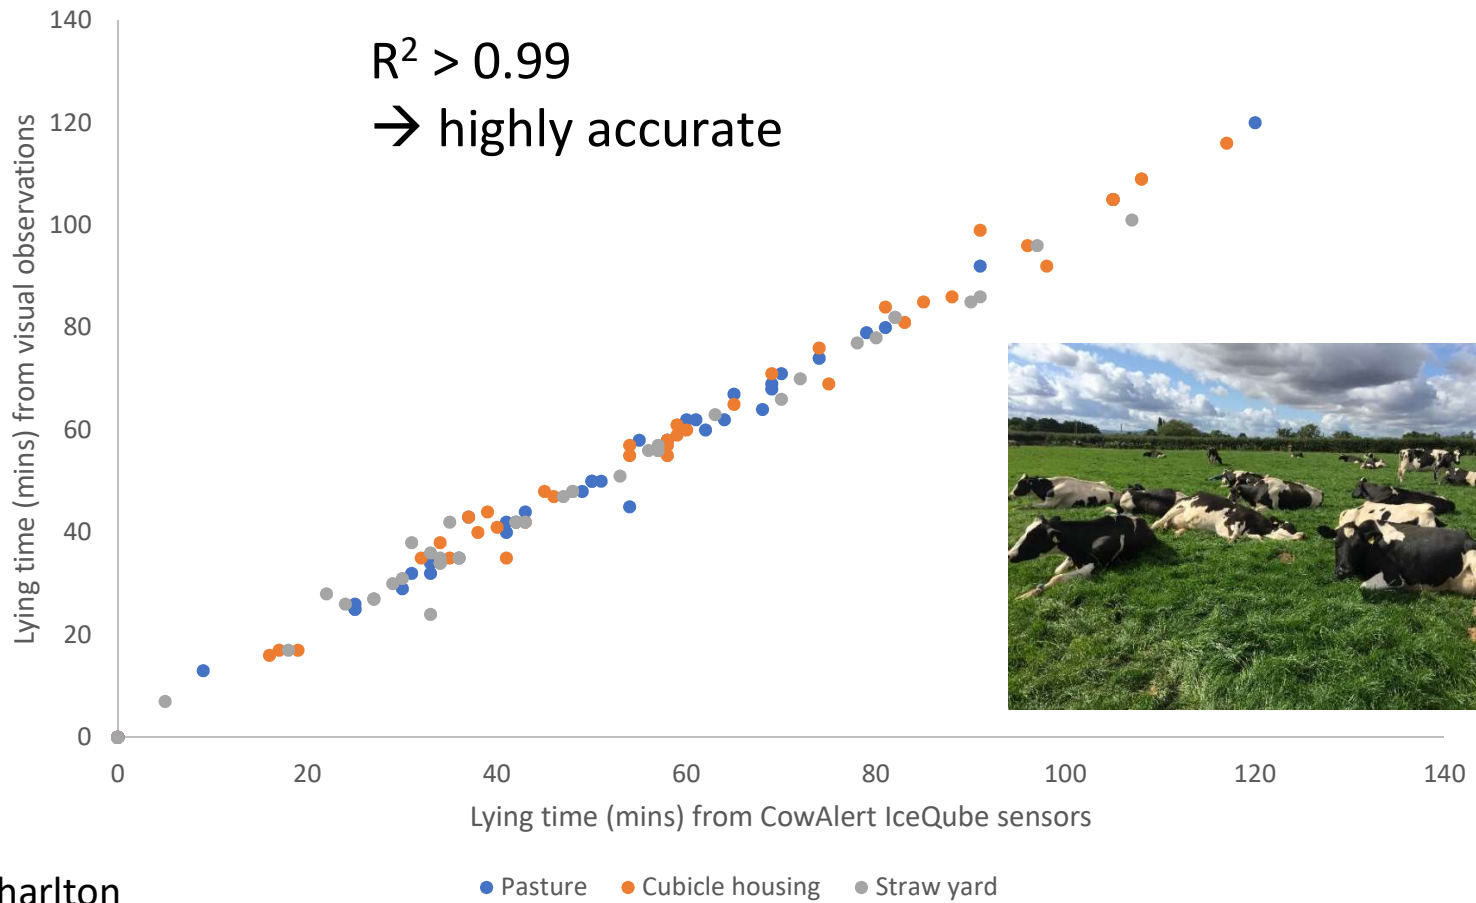

Motion Index

+ Transition timestamps

## Lying Time from IceQubes

Modified from G. Charlton

## Reasons for Low Lying Time

- Overstocking (cubicles & feed space)
- Idle time (waiting to get milked or inseminated)
- Being shut out of lying areas during scraping
- Cubicles too small or uncomfortable
- Long walks
- Heat stress
- Etc

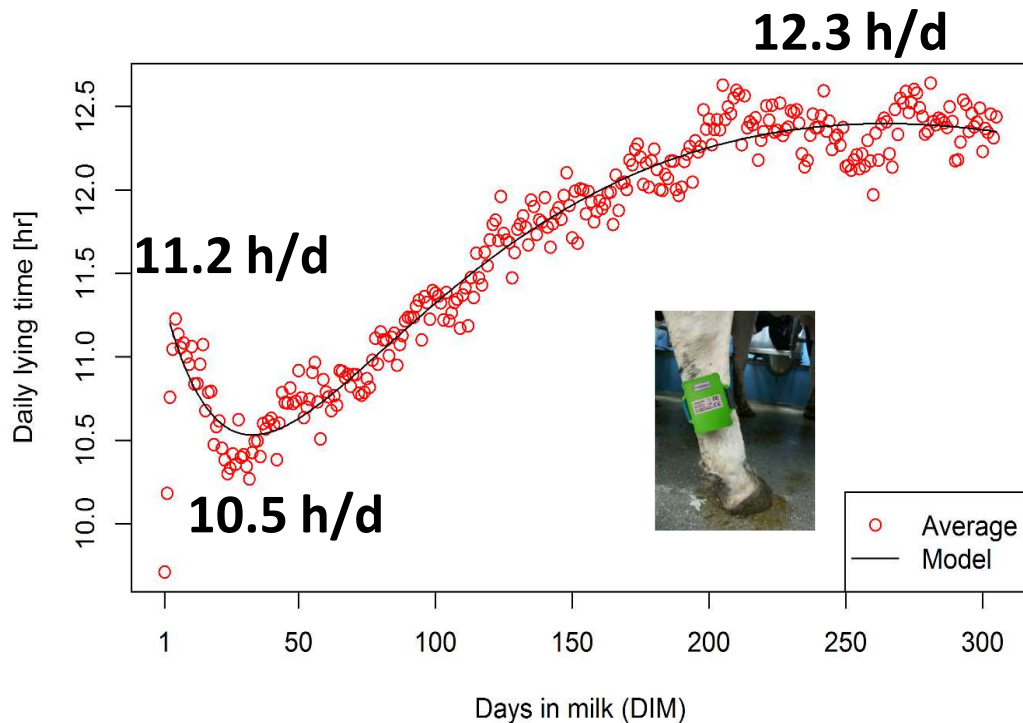

Photo: Nick J Bell, Bos International, UK 8

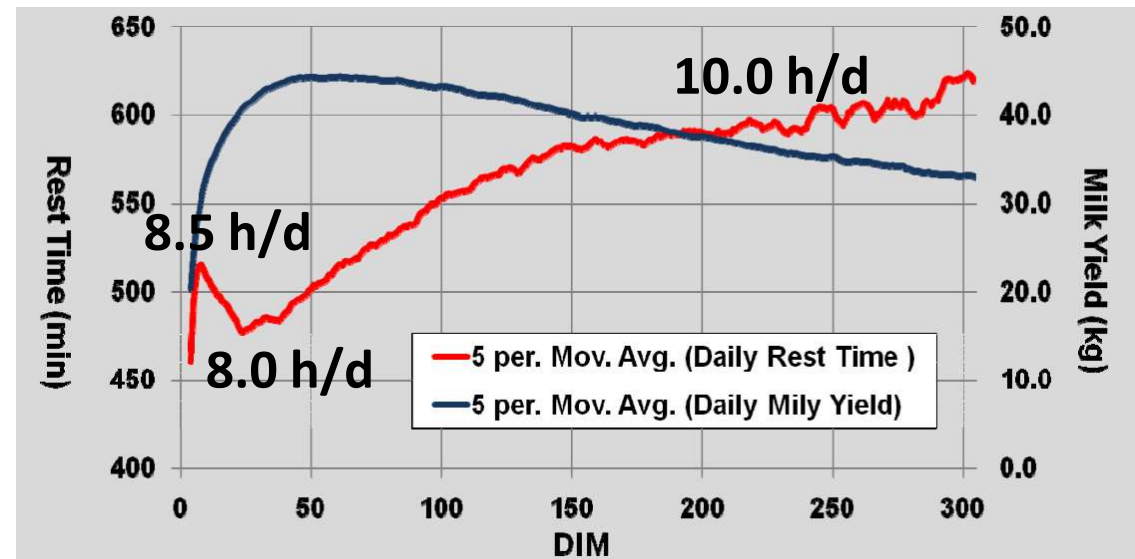

## Lying Time in Commercial Farms

2-3 h/d less lying → effect of 3 milkings/d? Heat stress? A combination?

Maselyne et al (2017) Res Vet Sci 110: 1-3:  
4 commercial Danish farms, 366 cows, 2 milkings/d

Arazi et al (2010) ICAR presentation:  
6 commercial Israelian farms, 1810 cows, 3 milkings/d

Focus on 'Outliers'

- Lying Time - Herd Distribution

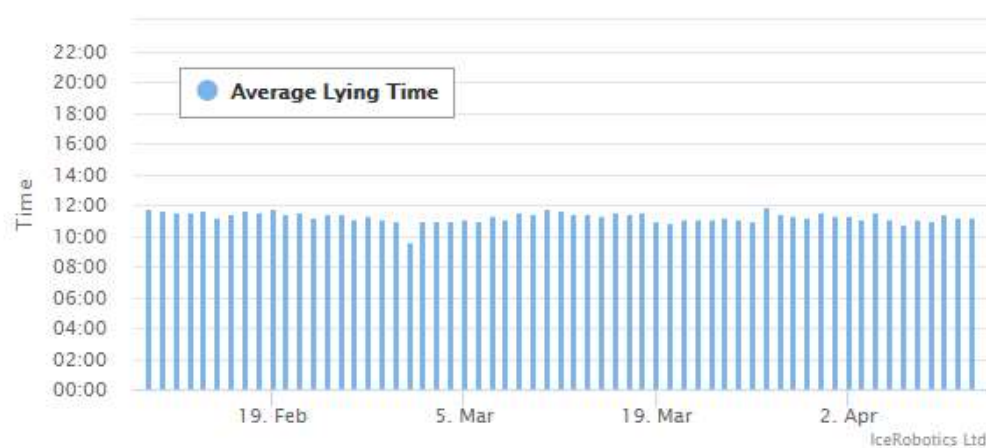

Jump to site...

End Date: 2018-04-10 Hourly Range: 2h

7 day lying time distribution to 2018-04-10

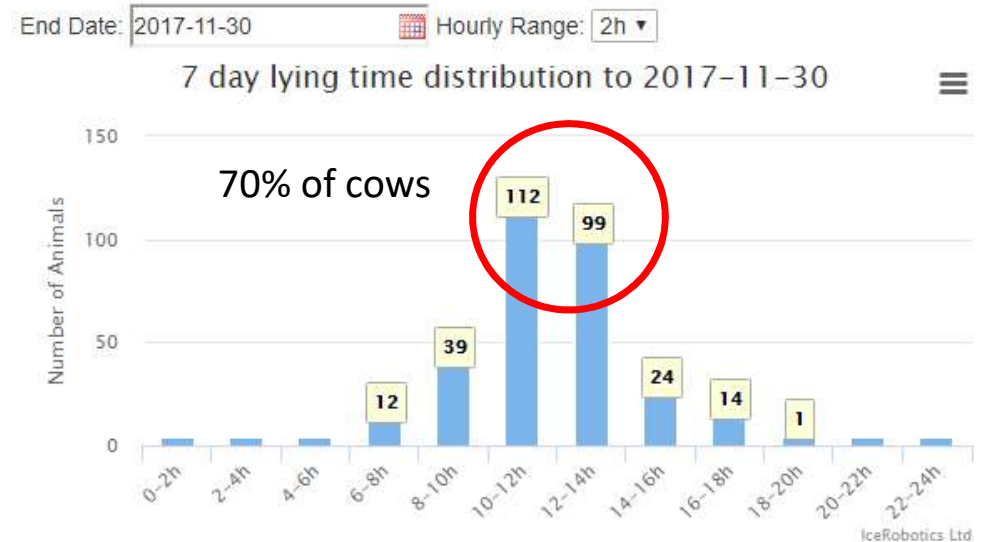

Herd Lying Time - Average

# Benchmarking across Time

Reduction from 3 to 2 milkings/d added 10% cows to optimum lying time of 10-14 h/d

## The DASIE Project

### Dairy Animal Sensor Integrated Engineering

- August 2014 – 2017
- Budget £1.7 million
- Supported by the UK government
- 4 partners, IceRobotics the lead
- Data from 5 commercial farms and 2 research herds
- 2,240 cows with IceQubes

**Innovate UK**  
Technology Strategy Board

## Why focus on lameness?

1. 25–30% of dairy cows are lame at any one time<sup>1</sup>
2. On average, farmers only notice 1 out of 4-5 lame cows<sup>2</sup>
3. Lame cows are in severe pain for ~3 months<sup>3</sup>

<sup>1</sup> Barker et al (2009) JDS 93: 932-941

<sup>2</sup> Archer et al (2010) In Practice 32: 492-504

<sup>3</sup> Bruijnjs et al (2012) Animal 6: 962-970

## Lameness Reduces

- Yield: **270-857 l milk lost** over a lactation
- Oestrus behaviour: **mounting period shortened** from 5.2 to 1.8 h
- Reproduction: **first ovulatory oestrus delayed** by 19 days
- Longevity: **increased culling risk** (HR=1.45 for moderately lame cow, HR=1.74 for very lame cow)

Bicalho et al, 2007 Journal of Dairy Science 90: 4586-91

Huxley, 2013, Livestock Science 156: 64-70

Petersson et al, 2006 Animal Reproduction Science 91: 201-214

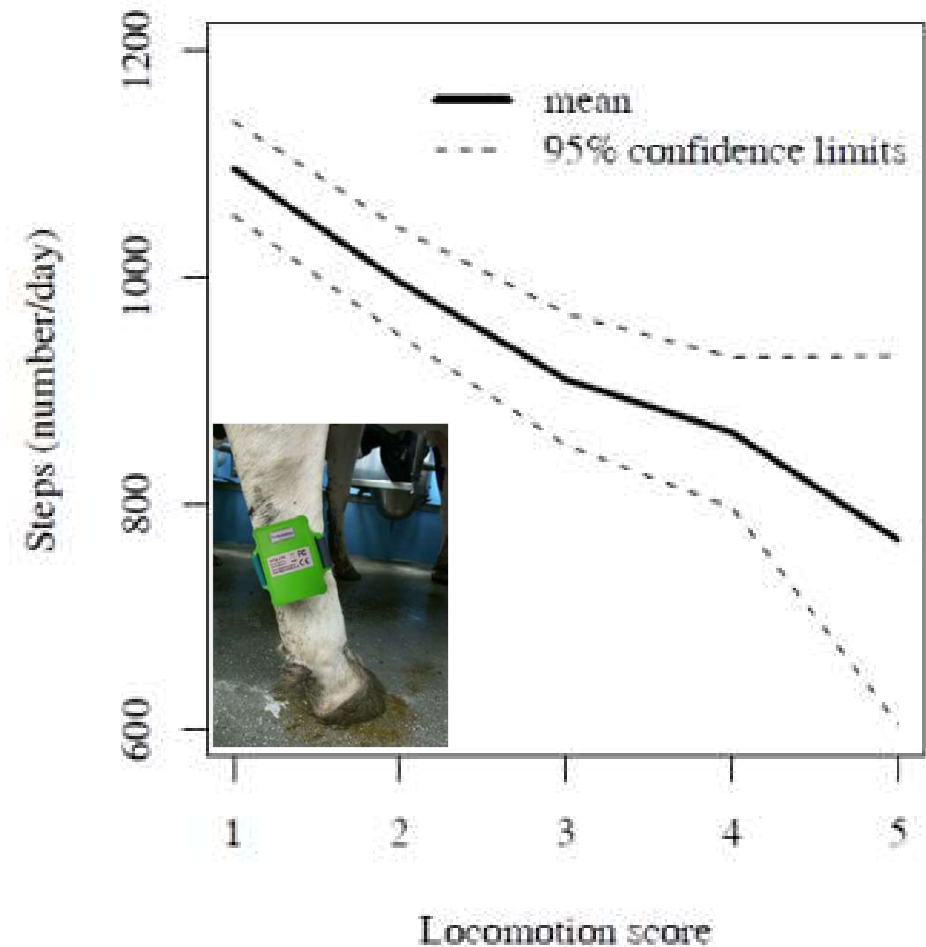

Walker et al, 2010 Reproduction in Domestic Animals 45: 109-117

## Lameness affects Behaviour

Lying time	119%
Number of steps	95%
Leg activity	80%

And we can monitor behaviour automatically

Blackie et al, 2011 Applied Animal Behavioral Science 134: 85-91

Thorup et al, 2015 Animal 9: 1704-12

Wadsworth et al, 2016 Proc. PDF Conference, Leeuwarden, NL: 315-19

## Development of lameness model

- Visual mobility scores used as reference
- 6755 MS on 7 farms in 2016
- 1 of 2 trained observers
- Scale 1-5<sup>1</sup> (1 = perfect, 5 = severely lame)

	Visual mobility score					
	1	2	3	4	5	Total
Number of observations	412	4810	1382	146	5	6755

<sup>1</sup>Chapinal et al, 2009 Journal of Dairy Science 92: 4365–74

# Automated Lameness Detection

cow birthdate  
& farm KPIs

Automated  
Lameness  
Probability  
(ALP)

## Lameness Alerts on Farm

### Lameness – New Alerts

last 7 days

	Cow	Estimated Start	Alert Value	Alert Generated	Alert Outcome	
	<input type="text" value=""/>					
1	6282	03 Dec 2017	83.6	04 Dec 2017	Lameness	
2	348	03 Dec 2017	85	04 Dec 2017	Lameness	
3	795	03 Dec 2017	75.8	04 Dec 2017	Lameness	
4	833	03 Dec 2017	81.8	04 Dec 2017	Lameness	
5	6334	02 Dec 2017	86.8	03 Dec 2017	Lameness	
6	797	02 Dec 2017	81	03 Dec 2017	Lameness	
7	226	02 Dec 2017	90.4	03 Dec 2017	Lameness	
8	34	02 Dec 2017	89.6	03 Dec 2017	Lameness	
9	803	29 Nov 2017	83.8	30 Nov 2017	Lameness	
10	689	29 Nov 2017	79	30 Nov 2017	Lameness	
11	804	29 Nov 2017	82.6	30 Nov 2017	Lameness	
12	542	29 Nov 2017	77.4	30 Nov 2017	Lameness	
13	408	29 Nov 2017	77.6	30 Nov 2017	Lameness	
14	3737	28 Nov 2017	73.6	29 Nov 2017	Lameness	
15	2436	28 Nov 2017	93.6	29 Nov 2017	Lameness	

### Lameness Status

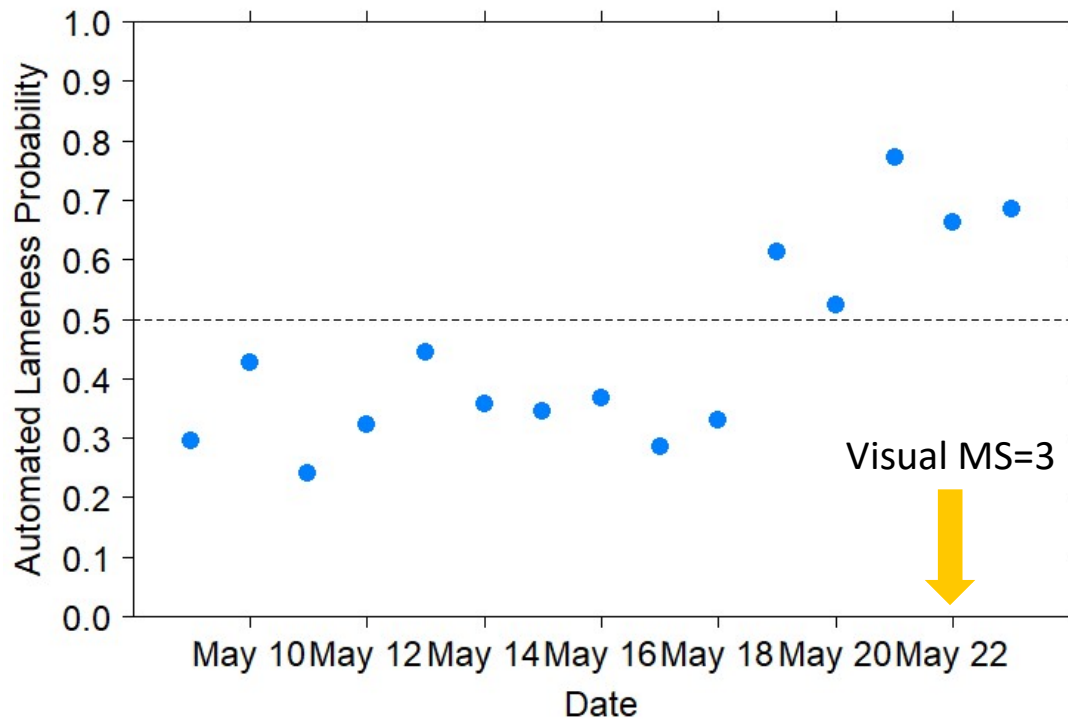

See cows not evaluated for lameness

58

## Detection Example (sole ulcer)

Cow #354.756. ALP 2 weeks prior to SU diagnosis, MS=3

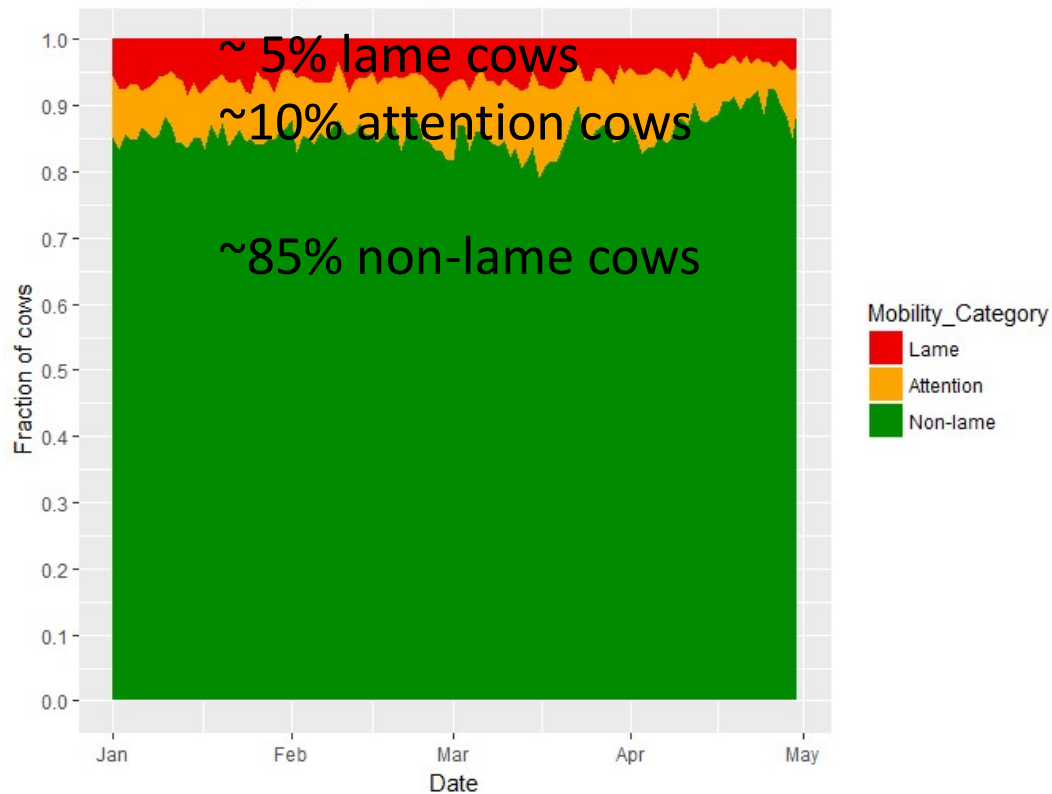

Trim and treat

## Herd Mobility Overview

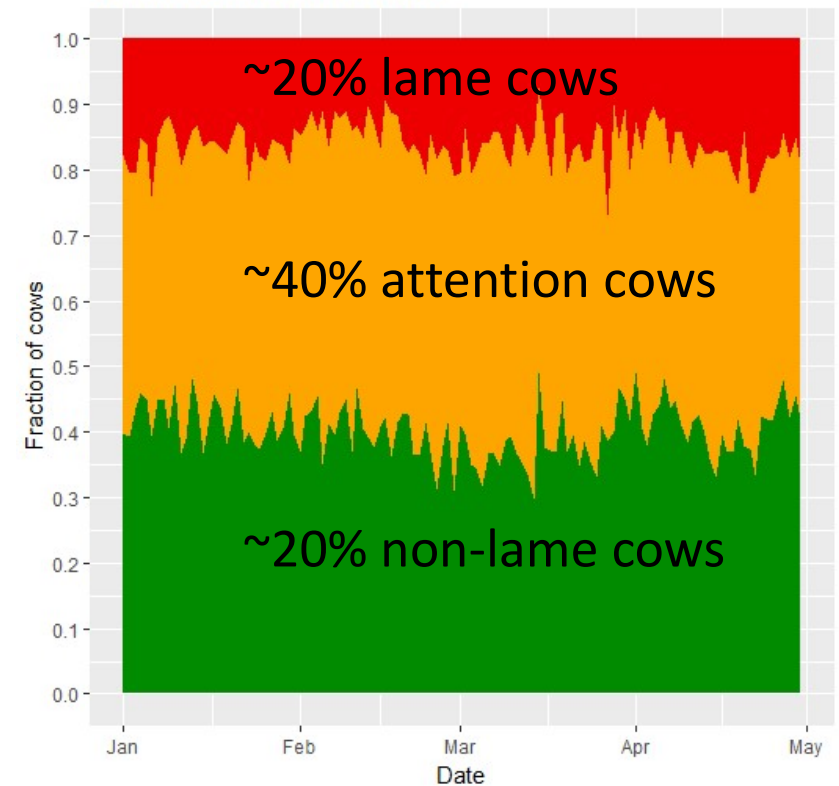

### Herd E - good mobility

Commercial farm (600 cows)

### Herd C - severe lameness issues

Commercial farm (150 cows)

# The Future - Benchmarking

Automated mobility score in 9 farms (%), n=2936 scores

## Summary

- ✓ Automated lameness detection is objective and monitors every cow around-the-clock every day
- ✓ The ALP is capable of demonstrating beneficial effects of a painkiller on lame cows
- ✓ In the future, ALP may enable objective benchmarking across herds
